Date became FTN participant:	FTN Manager contact:
2008	Pablo Pereira - Ignacio Molina - Mario Pereira

## DESCRIPTION

Bosques Tropicales Bolivia S.A. main activity is the development of forestry plantations for wood export and industrial supply. This activity is highly efficient and competitive compared to a natural forest, with a positive social and environmental impact. In that sense, we have the capacity to supply added value wood which is both socially and environmentally friendly.

### What do we offer?

Bosques Tropicales Bolivia offers you an option for diversifying your investments with a high yield in a sustainable and ethical way: tropical wood.

The idea is to participate in the business of producing high-economic return wood by purchasing tropical wood

trees grown on plantations. The investment includes the maintenance and care services required to ensure the best quality wood for each productive cycle.

There is a two-fold source of benefits: the client/owner of the trees profits from the natural growth of the trees and, in addition, can expect a higher return due to the revalorization of the price of tropical wood in international markets.

Bosques Tropicales Bolivia is not only the sole Bolivian company to use state of the art Bio Technology but is also the oldest and most experienced in the field.

## ACTIVITIES

Field of activity	Share of business turnover (%)	Main equipment	Installed capacity
Development of commercial forestry plantations	60%	Agricultural machinery, tooling and plantains.	1.300.000 plantains a year 2.000 ha/year
