WATER RISK FILTER 5.0 WHAT'S NEW?

BETTER DATA, EASIER TO USE

Thirty-two basin indicators and faster operational risk questionnaires will provide unparalleled assessments of water risk. Users will be able to filter data using maps, charts, tables and figures to develop clearer insights into their water risk exposure.

ACCOUNTING FOR THE VALUE OF WATER RISK

Powered by CDP Water Security, a new user-guided valuation module will more rigorously analyse how water risks can affect the financial value of assets, enabling companies and investors to evaluate the potential financial impacts of water events on their operations, supply chains or investments.

HELPING COMPANIES TO RESPOND TO RISK

The tool offers a customised set of recommended actions to respond to assessed water risks. All 150 actions are linked to leading frameworks (e.g. CEO Water Mandate Water Stewardship Toolbox, AWS, CDP, Ceres Aqua Gauge, SDGs, etc.) to help users align their efforts within the broader water stewardship ecosystem.

HARNESSING HIGH RESOLUTION DATA

More than 12 million km² of high resolution water risk maps will offer an alternative local view for conducting risk assessments, and guiding responses

TOGETHER POSSIBLE

The tool will link up with other frameworks, platforms and partners, to ensure a seamless ecosystem of water stewardship tools.

A SINGLE, UNIQUE TOOL FOR A WORLD OF WATER RISKS

Designed to be easy to use by non-water experts

Results are based on the best available scientific data

Covers all industries and all countries

The only tool to assess both basin and operational water risk

The only tool to provide customised guidance on how to respond

The only tool to enable an understanding of how a portfolio's water risk exposure translates into financial value impacts

State-of-the-art analysis can identify risk hotspots and prioritise interventions
